

Instructions for installing & running the complimentary PULSE Archive Standalone report program

This PULSE Archive report only displays the status of your Macola database. It does not update any data. It is designed to introduce you to our PULSE Archive software.

Do you wish your Macola software ran faster?

Macola is a high-performance system, but as you accumulate more and more data, it naturally takes longer and longer to sort through the data in day-to-day use. The result is a database that will take longer and longer to perform everyday tasks. The PULSE Archive Software removes unneeded data from your Macola database and archives it to another Macola database in the event you need it in the future. The result is that your Macola database will be smaller and will run faster; AND you will always have access to your old data in the future, when needed.

Step 1: **Click here** to download the file from DropBox.

Step 2: Select your SQL server and database names. Key in your login name and password or optionally select 'Trusted Connection'. Click the 'Test Connection' button to verify that it is ready to run.

Step 3: Click the 'Archive Report' button. Export the results to Excel and send us a copy for a no-cost analysis.

For more information on any of our PULSE family of Macola® add-on software products, call (513) 723-8091

Leahy Consulting is an independent ERP consulting company with over 30 years of experience supporting and optimizing the Macola® ERP software. We are not associated with ECi® Software. Visit www.PULSEDashboard.com
